### **Description of the activity carried out**

Each partner institution created, assembled and published educational and expert materials for OER repositories in their area of expertise. These materials were created following all the guidelines and best practices that were previously defined. Materials were included audio, video and written text content and they are published on each partner institution's node.

University partners created teaching materials from specific fields of their interest, and industrial partners gave their OER which are related to specific knowledge of their practice.

Every university partner created Edx node for developing materials. Activity 4.1 began with a delay of three months until all partners have set up the necessary equipment to operate. During this period, each partner implemented EDX on their node.

### **Specific and measurable indicators of achievement**

Baektel WB partners published 62 OER with description on Baektel meta-portal. Published OER by partners: NIS-8; UBL-3; UNTZ-10; UNI-14; AMP-1; UNIKG-8; UB-12 and UNIM-6.

Partners were able to become familiar with the selected platform and they could develop working versions of courses. Final versions of the courses are hosted at <http://edx.baektel.eu/>. This activity lasts until the end of 2016, which includes further work on the creation of OER and innovation of existing materials. Table 1 gives addresses of each partners' node:

<b>Institution</b>	<b>Address</b>
UNI	160.99.1.203
